

# Scenario 1 –

Name: Ellie Lewis

Age: 14

Hometown: Poole

Ellie, 14, is a full-time student at a special needs school. She has Cerebral Palsy, various heart conditions and Epilepsy and requires regular medication to keep her alive. A total of 24 different medications are required four times a day. Despite her poor physical health, due to her life limiting condition, Ellie enjoys doing regular activities that any other 14-year-old does. For example, going out with friends, travelling and basically just having fun.

Ellie is very clever and loves any sort of technology – going nowhere without her smart phone. She is about to start her GCSE's earlier than usual for her age, meaning her schedule is busy and she forgets to go to the nurse's office at her allocated time slot. Ellie feels like she would benefit from an app that will remind her to get her medication at specific times.
